IMPORTANT NOTIFICATION

International Application No. **PCT/AU03/00372**

HAWTHORN VIC 3122

International Filing Date 27 March 2003

Priority Date 27 March 2002

Applicant

LAZER SAFE PTY LTD. et al

- 1. The applicant is hereby notified that this International Preliminary Examining Authority transmits herewith the international preliminary examination report and its annexes, if any, established on the international application.
- A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.
- Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translations to those Offices.
- 4. REMINDER

The applicant must enter the national phase before each elected Office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices)(Article 39(1))(see also the reminder sent by the International Bureau with Form PCT/IB/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details on the applicable time limits and requirements of the elected Offices, see Volume II of the PCT Applicant's Guide

N	,	PCT/AU03/00372
 		Lack of unity of invention
1.	In re	esponse to the invitation to restrict or pay additional fees the applicant has:
		restricted the claims.
		paid additional fees.
		paid additional fees under protest.
		neither restricted nor paid additional fees.
2.		This Authority found that the requirement of unity of invention is not complied with and chose, according to Rule 68.1, not to invite the applicant to restrict or pay additional fees.
3.	This A	Authority considers that the requirement of unity of invention in accordance with Rules 13.1, 13.2 and 13.3 is
		complied with.
	X	not complied with for the following reasons:
		1. The claims 1 - 52 and 57 relate to an industrial press safety system or a method of operating such a system. The feature that "the speed of the movable section is controlled with a controller adapted to decelerate the movable section from a first speed within a deceleration zone said zone defined between a first point at which a first planar beam passes a speed control point and a second point at which a second planar beam passes the speed control point" forms the first special technical feature.
		2. The claims 53 - 56 relate to a method of setting a safety distance between a single planar beam and a leading edge of a movable section of an industrial press. The feature that "converging the planar beam along an axis parallel to the movement of the movable section until the leading edge interrupts the planar beam and diverging the planar beam away from the leading edge by a predetermined distance" forms the second special technical feature.
		The above two groups of claims do not share any of the special technical features identified, a technical relationship between the inventions does not exist. Accordingly the claims do not relate to one invention or so a single inventive concept.
	The fo this rep	llowing parts of the international application were the subject of international preliminary examination in establishing
	L	all parts.
	X	the parts relating to claims Nos. 1 - 52 and 57

2. Citations and explanations (Rule 70.7)

1.

Novelt (N) and Inventive Step (IS)

The claimed invention relates to an industrial press safety system or a method of operating such a system.

The method/apparatus comprises a movable section with a laser device/ light receiver emitting/ receiving a plurality of planar beams and a controller adapted to decelerate the movable section from a first speed within a deceleration zone said zone defined between a first point at which a first planar beam passes a speed control point and a second point at which a second planar beam passes the speed control point. This arrangement allows the press to operate at higher speeds thereby achieving shorter production times. None of the documents cited in the International Search Report discloses all these features. Hence the claims are novel and considered to involve an inventive step.
